

# ZIPPERED RETROFIT MATTRESS COVERS

*Revive your old and stained mattresses for another few years with our zippered retrofit mattress covers.*

Over the years, your mattresses are likely to become stained, torn, and dirty. With our zippered retrofit covers, you can give new life to your mattress and allow them to stay in circulation for another few years.

Our inverted seam covers will also help you prevent or mitigate a bed bug problem. Bed bugs love to hide in the taped edges of a conventional mattress. By placing our retrofit cover on an existing mattress, you will cover up the “taped edge” portion of the mattress thereby eradicating the bed bugs hiding place.

If you have already experienced a bed bug problem, you can place the cover on a mattress to prevent any bed bugs within the mattress from getting out. The cover must then stay on the mattress for a minimum of one year to ensure total elimination of possible bed bugs within the mattress.

No other mattress cover in the marketplace has the superior performance of our SOFlux OX<sup>®</sup> covers. Our retrofit covers are fluidproof (including biohazardous body fluids), stain resistant, anti-bacterial, anti-fungal, breathable, comfortable, and easy to place on the mattress. They are also easily cleanable with a soap and water and can be disinfected with a 10% solution of bleach in water.

We custom manufacture each order to ensure a perfect fit, even on odd size mattresses.

A conventional mattress has quilting seams and taped edges where bed bugs can hide and lay their eggs.

With a retrofit cover, the mattress will look new again. No stains, tears, or places for bed bugs to hide.
