

TAPED EDGE UNIVERSITY MATTRESS WITH FIRE BLOCKER

COVER - The mattress cover is made of a polyurethane coated nylon which is fluidproof, easily cleanable, bacteria resistant, anti-fungal, and very stain resistant. This cover allows for more air flow, resulting in maximum body breathability and dramatically less body heat buildup than vinyl covers. This means increased comfort when compared to conventional vinyl mattresses, and unlike vinyl, this cover will not crack with wear. Therefore the polyurethane coated nylon cover is superior to vinyl in durability, aesthetics, and above all comfort.

CONSTRUCTION - This mattress contains a #312 13 gauge innerspring unit with 6 gauge perimeter border rods and covered with a 2 oz. bonded polyester insulator pad on each side. The padding is made with extremely durable 1" California Technical Bulletin 117 fire retardant polyurethane foam on each side and is completely encapsulated with Integrity 30[®] fire barrier. The mattress is closed with taped edges and contains a two year warranty.

FIRE SAFETY – This specification has passed the most stringent institutional full-scale burn tests, including California Technical Bulletin 129, UL-1895, Boston Fire Department (BFD) IX-11, California Technical Bulletin 603 and the new federal register CPSC 16 CFR Part 1633.

This cost effective mattress is an economical way to fulfill your university mattress requirements.
